

Redirect Http to HTTPS - Apache2

It is not possible to direct HTTPS to HTTP as that is redirecting secure traffic to less secure method, but the other way around is ok!

<https://askubuntu.com/questions/653923/force-https-and-www-with-virtual-host-apache2/653925#653925>

```
<VirtualHost *:80>
    ServerName freesoftwareservers.com
    ServerAlias *.freesoftwareservers.com
    Redirect / https://www.freesoftwareservers.com/
</VirtualHost>

<VirtualHost *:443>
    ServerName freesoftwareservers.com
    Redirect / https://www.freesoftwareservers.com/
</VirtualHost >

<VirtualHost *:443>
    ServerName www.freesoftwareservers.com

###

</VirtualHost >
```

This all goes inside one virtual host file (sites-available)
