

Install Plex - Ubuntu

Go to <https://plex.tv/downloads> and copy the latest DL link for the proper package and then wget.

Note: There was a major revision change from v0.9 to v1 but I found issues, so I use the link below. 11-13-16

Example:

```
sudo wget "https://downloads.plex.tv/plex-media-server/0.9.16.3.1840-cece46d/plexmediaserver_0.9.16.3.1840-cece46d_amd64.deb"
```

Install via:

```
sudo dpkg -i plexmediaserver_*.deb && service plexmediaserver start && sudo ufw allow 32400/tcp && sudo ufw allow 32400/udp && service ufw restart
```

Now configure via:

```
http://[Local Plex Media Server IP Address]:32400/web
```
