

Fix No Live Stream in ZMNinja

Update 2019:

This time I had to manually add

```
/zm/api
```

To the API section. I run a basic ZoneMinder installation behind an NGinX Proxy, here is my NGinX config for reference:

```
location / {  
    proxy_pass      https://192.168.1.255:443/  
    include         /etc/nginx/proxy.conf;  
}  
}
```

I also had to disable HTTP Auth and use ZoneMinder Auth 🚫

Manually add

```
/cgi-bin/nph-zms
```

To path to cgi-bin inside ZM Settings.
