

# VMWare ESXI 6.0 - Failed to dploy OVF package: The task was cancelled by a user.

If your OVA package was [deployed with this CD-ROM state](#) than this will fix your issue. If not, this probably won't help.

Basically you extract the OVA with 7zip. Delete the manifest file and edit line ~96 inside the .ovf file.

## Change this:

```
<rasd:ResourceSubType>vmware.cdrom.iso</rasd:ResourceSubType>
```

## To This:

```
<rasd:ResourceSubType>vmware.cdrom.atapi</rasd:ResourceSubType>
```
