

VMWare Install Error 29141

I got this installing VMWare Converter on a FRESH Windows 10 x64 Pro VM running inside a VMWare ESXi 6 host. But, the article that I found the fix in was related to installing VMWare Workstation, regardless, the fix worked!

Time to do some RegEdit Magic!

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\vstor2-mntapi10-shared\
```

Look for Key with string

```
"Vstor2 MntApi 2.0 Driver (shared)"
```

Rename >> Reboot >> Install VMware Converter
