

Fix - This module requires Asterisk chan_motif & res_xmpp to be installed and loaded

I am assuming you are on an already configured system, we will be "re-installing" asterisk after installing the missing packages.

```
cd /usr/src
wget http://pkgs.fedoraproject.org/repo/pkgs/iksemel/iksemel-1.4.tar.gz/532e77181694f87ad5eb59435d11c1ca/iksemel-1.4.tar.gz
tar zxvf iksemel*
cd iksemel*
./configure && make && make all && make install
cd /usr/src/asterisk*
make clean
./configure
make menuselect
```

```
make && make install
```

```
reboot
```

OR

```
amportal kill && amportal start
```
