

# Install ESXi HTML5 Web Client

This is still in beta with some small known issues. Read more [here](#)

**Install via SSH/CLI:** (Unfortunately, they have started adding version to the vib, so if they update, then this won't work, but I requested they have an html link for esxui\_signed\_latest.vib, so well see if they do it!)

```
esxcli software vib install -v https://download3.vmware.com/software/vmw-tools/esxui/esxui-signed-4393350.vib
```

**Uninstall via SSH/CLI:**

```
esxcli software vib remove -n esx-ui
```
