

Completely Remove Intel Bluetooth Stack - Windows 10

Ok, so I couldn't get the Drivers to revert to Microsoft's and Intel's drivers were broken. I tried uninstalling the drivers via the exe and via device manager and in safe mode. NOTHING.

This worked.

Download [PsExec](#) from [here](#).

Unzip and place in Root of C: Drive.

Now open CMD with Admin Privileges and run the following:

```
C:\PSTools\psexec -i -s regedit.exe
```

This opens RegEdit in a way that you can do serious damage! Be Warned

Now delete all keys under >>

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Enum\Bluetooth
```

Now use Installation Executable to uninstall Intel Drivers & Reboot.

You should now see the BT stack working and back to Microsofts crap drivers, if you'r like me and just trying to get back to Toshiba BT Stack, read [here](#).
