

Push Current Running Directory inside Batch File - Run VBS in same directory

I personally tested this to make a script + external VBS script portable, aka I wanted the VBS path inside the CMD to be "relative" (same directory). It would likely work for other purposes.

Just add this to the top of the CMD:

```
pushd %~dp0
```

Then use this in CMD to call file in CD:

```
"%~dp0File.txt"
```
