

# Multi-Line MsgBox in VBA

There are many ways of doing this, but this is the one I settled with:

```
Public Sub Update_Msg()  
  
Dim line1 As Variant  
Dim line2 As Variant  
Dim line3 As Variant  
Dim line4 As Variant  
'Dim line5 As Variant  
'Dim line6 As Variant  
'Dim line7 As Variant  
  
line1 = "Line1"  
line2 = "Line2"  
line3 = "Line3"  
line4 = "Line4"  
'line5 = "t"  
'line6 = "t"  
'line7 = "t"  
  
    MsgBox line1 & vbCrLf & vbCrLf & _  
        line2 & vbCrLf & vbCrLf & _  
        line3 & vbCrLf & vbCrLf & _  
        line4 & vbCrLf & vbCrLf & _  
        line5 & vbCrLf & vbCrLf & _  
        line6 & vbCrLf & vbCrLf & _  
        line7 & vbCrLf & vbCrLf  
  
End Sub
```
