

Enable Custom Backup Locations

So, I enabled all things false to do this easily, and the three things that are default false, I figured I wanted them enabled anyway!

```
sed -i -e 's/false/true/g' /var/atlassian/application-data/confluence/confluence.cfg.xml
```

```
root@confluence:cat /var/atlassian/application-data/confluence/confluence.cfg.xml | grep false
<property name="admin.ui.allow.daily.backup.custom.location">false</property>
<property name="admin.ui.allow.manual.backup.download">false</property>
<property name="admin.ui.allow.site.support.email">false</property>
```

```
root@confluence:sed -i -e 's/false/true/g' /var/atlassian/application-data/confluence/confluence.cfg.xml
```

```
root@confluence:cat /var/atlassian/application-data/confluence/confluence.cfg.xml | grep false
```
