

Proxying Windows Admin Center via Caddy

<https://caddy.community/t/guide-for-windows-admin-center-proxy-from-linux-vm-to-server-core/7192/8>

Install latest caddy binary, at this time, I mean latest! (this is "bleeding edge", see above link) IMO, but should be mainstream soon enough.

Example Simple Caddyfile:

```
cat << 'EOF' >>/var/www/html/wac/Caddyfile
https://cadtest.domain.com {
  tls /etc/ssl/certs/domain.crt /etc/ssl/private/domain.key
  reverse_proxy 192.168.1.42:443 {
    transport http_ntlm
  }
}
EOF
cd /var/www/html/wac/
caddy run
```
