

Tweak VLC for use with Kodi - Auto Full-screen - Auto Exit - Network Cache

Ok so I have it set up where VLC starts automatically Full-Screen and then when it gets to the end of the clip, it Automatically exits, which then brings you back to Kodi! Also you can mess with Network Cache if you need to. If you get error messages but everything works fine, check out the Unimportant setting regard unimportant error messages.

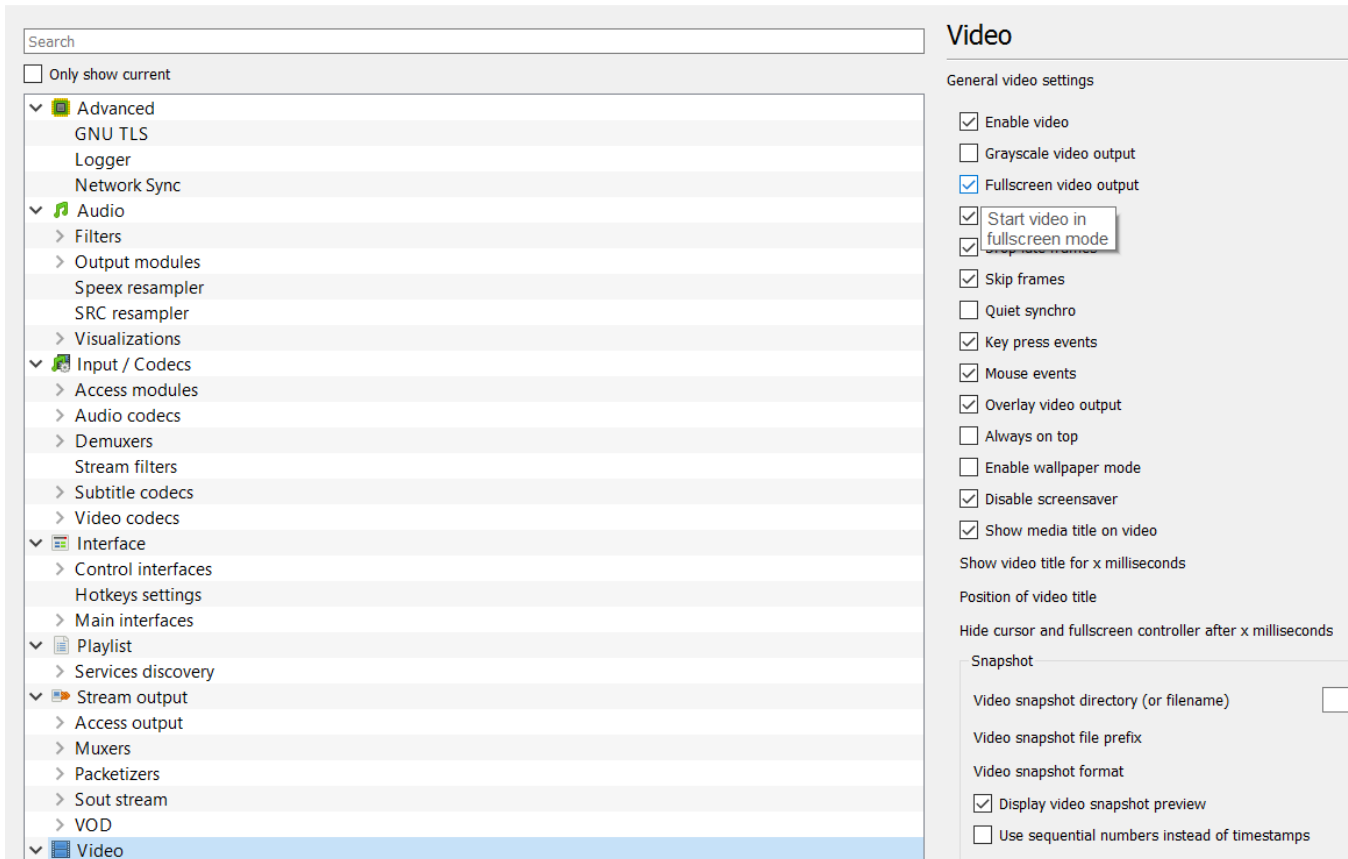

Advanced Preferences

The screenshot shows the VLC Advanced Preferences window with the 'Playlist' category selected in the left sidebar. The right pane is titled 'Playlist' and contains the following settings:

- General playlist behaviour**
 - Play files randomly forever
 - Repeat all
 - Repeat current item
 - Play and exit
 - Exit if there are no more items in the playlist.
 - Start paused
 - Auto start
 - Pause on audio communication
 - Allow only one running instance
 - Use only one instance when started from file manager
 - Enqueue items into playlist in one instance mode
 - Use media library
 - Display playlist tree
- Default stream**
 - Automatically preprocess files
 - Allow metadata network access

Advanced Preferences

The screenshot shows the VLC Advanced Preferences window with the 'Video' category selected in the left sidebar. The right pane is titled 'Video' and contains the following settings:

- General video settings**
 - Enable video
 - Grayscale video output
 - Fullscreen video output
 - Start video in fullscreen mode
 - Skip frames
 - Quiet synchro
 - Key press events
 - Mouse events
 - Overlay video output
 - Always on top
 - Enable wallpaper mode
 - Disable screensaver
 - Show media title on video
- Show video title for x milliseconds
- Position of video title
- Hide cursor and fullscreen controller after x milliseconds
- Snapshot**
 - Video snapshot directory (or filename)
 - Video snapshot file prefix
 - Video snapshot format
 - Display video snapshot preview
 - Use sequential numbers instead of timestamps
